

EXTER PRO+ OPERATOR TERMINALS FULL OF POSSIBILITIES

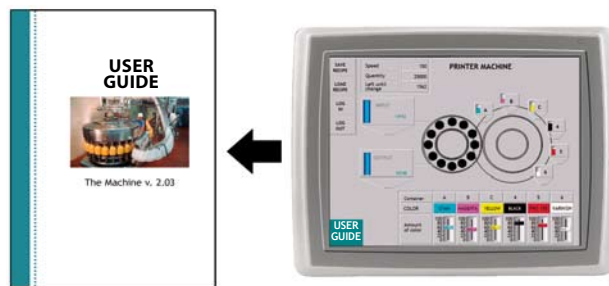

EXTER Pro+ operator terminals offer new possibilities for information sharing between people and machines. Features such as PDF-viewer, Internet browser and support for AXIS network cameras, ensure that valuable information always is available where it is needed the most – right at the hands of the operator.

Cost-efficient handling of manuals and instructions

With EXTER Pro+, machine builders can include manuals and other documentation electronically at the delivery of a machine. The documents are simply put as PDF-files on a memory card that is inserted in the operator terminal. Cost-efficient updates can be made by mailing out the new versions, or making them available for download on a website.

New possibilities to facilitate information sharing

The EXTER Pro+ operator terminals include an internet browser. This makes it possible to access information that is published on the Internet or an intranet from any operator interface in a factory. For instance, a production manager can save a lot of time by posting the daily production plan on a website. Operators can then read the information directly from their machines and run the processes accordingly.

The PDF-viewer in EXTER Pro+ makes it easy to ensure that the operator always can access updated machine instructions.

Saves valuable time and prevents downtime

For the end-users, the benefits are many. They no longer have to look for the machine's instruction manual. Or for the service manual and troubleshooting guide when something goes wrong. All machine documentation is available by a simple press on the operator terminal. The documents can also be stored in different password-protected levels to ensure that only authorized personnel can access the information.

In cases where a network camera is used, the operator can quickly make the right decisions based on live camera images. A safety stop before something goes really wrong can save many hours of process downtime.

With displays from 6.5 to 15.0 inches

There are five EXTER Pro+ operator terminals available, three with touchscreen display and two keypad terminals. For the keypad terminals, a mouse or a keyboard has to be connected in order to take advantage of the EXTER Pro+ capabilities. A 64 MB Compact Flash memory card is included at delivery, and it is also possible to use a USB stick to store PDF and/or PowerPoint files. The Pro+ version of EXTER includes all cutting-edge HMI technology that is available in the EXTER series from Beijer Electronics.

The EXTER Pro+ version is available in five models.
